Answers

Why do polar bears live in the Arctic?

Polar bears live in the Arctic because it is their habitat. They are well suited to live in cold, icy places.

Why do polar bears have thick fur?

Polar bears have thick fur to keep them warm in the cold water and air.

Why are polar bears good swimmers?

Polar bears are good swimmers because they need to hunt for food in the water.

Why do mother polar bears stay with their cubs for two years?

Mother polar bears stay with their cubs for two years to teach them how to hunt and stay safe.

Why do polar bears have big paws with rough pads?

Polar bears have big paws with rough pads to help them walk on the ice without slipping.
