

Birds Eggs

Birds lay eggs, not babies.

The eggs are kept safe in a nest.

- **The mother bird lays eggs in the nest.**
- **Inside each egg is a baby bird growing.**
- **The parent bird sits on the eggs to keep them warm.**
- **After some time, the eggs crack open.**
- **A baby bird hatches and comes out!**

The parents then feed and protect the baby birds until they are big enough to fly
