

Birds Nest

Birds make nests to keep their eggs and babies safe.

Here's how they do it:

- **They pick a safe place, like a tree, bush, or roof.**
- **They collect things like sticks, grass, leaves, and feathers.**
- **They carry the things in their beaks.**
- **They put them together carefully to make a little home.**
- **They add soft things inside so the eggs stay warm and comfy.**

The nest is like a bed and house for baby birds
